ENGINEER POWER PERFORMANCE TEST (m/f/d)

Our “Power Performance Test” team is looking for support on a full-time basis at the earliest possible date.

Your job responsibilities:

- Plan and execute power performance tests on wind turbines and wind measurements
- Coordinate between project participants internally and externally
- Set up measurement equipment in wind farms and potential wind farm sites
- Analyze collected data and prepare test reports
- As a contact person for our customers, advise them on all questions relating to these topics

Your profile:

- Successfully completed a university degree in natural sciences or engineering, preferably physics, electrical engineering or similar
- Solid command of written and spoken English and German
- Well-structured, self-organized and quality-oriented
- Teamwork and communication skills are among your strengths
- Proficient in the Microsoft Office Suite
- Willingness to travel domestically and internationally multiple times a year, sometimes on short notice
- Willingness to relocate to the Varel, Germany, region
- Ideally, professional experience in the wind energy business and/or meteorological measurement equipment and data evaluation
- Experience in scripting or programming languages (Matlab, Python) desired
- Hold a valid driver's license

We offer you:

- An exciting role in an experienced, dynamically growing, nationally and internationally operating company
- An innovative, interesting and fast-paced work environment
- A permanent employment contract
- Flexible work schedule
- Participation in the company pension plan and childcare subsidy
- Opportunity to participate in the Hansefit fitness program for employees
